

epicRIDES **TRAINING** **GUIDE**

HEALTH WARNING

Not all exercise programs are suitable for everyone, so please consult your physician before beginning this or any exercise program. You should always warm up for a few minutes before beginning any exercise program. You should never exercise beyond the level at which you feel comfortable. If at any time you feel that the recommended intensity is too difficult, reduce the resistance or shift to a lower gear. Take additional time to rest between sections if needed. If at any time you feel discomfort or you are exercising beyond your limit, you should slow down or discontinue the exercise immediately.

THE USER ASSUMES ALL RISKS OF INJURY IN USE OF THIS PROGRAM.

epicRIDES
presents

Tour **of the** **West**

Volume 1 -
Interval Workout

Take a virtual training ride across the Western U.S. riding in 10 different gorgeous locations!

Welcome to **epicRIDES™** - Real rides, shot in real places with real riders that are virtually amazing!

Here is what you will find in this Training Guide:

- An explanation about our Training Zone methodology
- An explanation of the **epicRIDES™** digital dashboard
- A blank Training Ride program for you or your trainer to write in your own training program for this ride

Additionally, on our web site (www.epicplanet.tv) you can also find:

- A MapMyRide.com Route Map of this epic ride with downloadable GPS data
- A way for you to nominate your own Epic Ride for consideration for filming by the epicPLANET.tv team at www.epicplanet.tv/myride
- A feedback form for you to share your ideas about **epicRIDES™** with us at www.epicplanet.tv/review

Your next step is to get your indoor cycling gear on, and get ready for an epic indoor experience! So pop your DVD in, get on your indoor bike, and let's get those wheels spinning!

Music mixes

In our **epicRIDES™** testing we have found that the choice of music for Indoor Cycle Training is very subjective and that it's virtually impossible to please everyone!

So we suggest that if our music is not for you, simply turn the volume down on the video and use your iTunes, Music Player or other digital music player software to create a your own playlist for this ride.

It's really pretty easy! Since our **epicRIDES™** is laid out in segments of five minute or multiples of five minutes, you can use your playlist creation software (such as iTunes) to organize your choice of songs for this ride; keeping in mind that you want your music for each segment to either fit or exceed the length of that segment. Then, when you ride, simply move the music ahead to the next segment's songs if your choices for the previous segment runs too long.

And with iTunes, you can even share your custom **epicRIDES™** playlist with us and other riders by creating an iMix (use your iTunes help for instructions)!

A Note to Indoor Cycling Instructors

For years, indoor cycling instructors have mixed their own music selections and then blended these with a class program of their choosing to deliver exciting and motivating classes to their participants.

Now, with **epicRIDES™**, indoor cycling instructors can bring a new dimension to their classes - the video dimension! **epicRIDES™** are designed to complement you, the Instructor. So now you can take your class far outside your studio to real and exciting places, riding along with real riders on a challenging route.

As an indoor cycling instructor, we suggest you use this Training Guide as a starting place in making this **epicRIDES™** "your own." Here are the steps:

1. Ride to this **epicRIDES™** yourself before using it in a class.
2. Choose to use our music or create your own mix.
3. Review our various workouts in this Training Guide and either use them as they are, adapt one as you see fit or invent your own!
4. Finally develop your own individual strategy to use to present and lead this ride.

If you believe, like we do, that using real road riding situations in Indoor Cycling Classes is a great new way to motivate, energize and excite your class, then you can be sure to deliver a compelling **epicRIDES™** class time after time.

About epicRIDES™ Training Zones

Indoors versus outdoors. Outdoors versus indoors, each type of training has advantages over the other. Yet, they both have the same training zones in common. What is a training zone, and why is it important?

First, let's start with the big advantage that indoors has over outdoors – one can easily argue it is the smooth “road” of the inside. When you are riding outside there are many variables, you work with and against wind, terrain, and a host of environmental, physiological and psychological factors. Inside you can control the environment and the terrain – thus, you can more readily work in specific training zones via the elimination of extraneous factors. Indoor training ensures your body is getting the prescribed stimulus of a specific training session. In contrast to the varying stimuli often created when the ride is outside.

Often we will ask athletes that we coach to ride inside for certain workouts to maximize the “dosage” of their workout. Each of the training zones is like a dose of medicine – the dosage creates a specific response in the body and thus a specific adaptation. So, the first thing that is essential is having the right dose dialed in – this dosage can be identified through the CycleOps Power Test (<http://www.saris.com/t-CPTC.aspx?skinid=2>). After you have completed your test you now have your zones (dosages) ready for your training plan. Your training plan (daily, weekly, monthly and annually that you or your coach created as a roadmap towards your goals) will identify for you when and how you need to exercise to create

the optimal adaptation of your physiology with the most efficient use of your time. Without a plan you are just working out – with a plan you build your strengths and improve on your weaknesses. Each training zone creates specific adaptations and each training zone fits into a larger whole. **The table on the next page highlights some of the key elements of each zone.** But keep in mind the body is in a constant state of flux and is always “blending” systems and hence, fiber type recruitment depending on fitness, neuromuscular pathways, bike fit and a host of other factors – thus, the following is offered as a generalization of the complexity of the body's intricacies.

Think of each zone as a building block for the next zone. As you build your physiology from the bottom up (Zone 1 to Zone 5), you are creating a stronger you. Each zone is dependent on the strength of the zones below it. Thus, the anaerobic system is dependent upon the strength of the aerobic system. The longer you can rely on the strength of Zone 1, the less you will have to rely on the limited capacity of the anaerobic system in Z5. The more wattage you can get out of Z1 the more energy you get at less cost to the body. It is just like driving your car in these days of high cost petroleum. By having an efficient and strong aerobic system you get more power at less cost – kind of like a “green” ride. As your threshold increases you will notice that your wattage output in each training zone increases! We all want more power at less cost... using training zones within a periodized training plan is the way to get more power out of less effort!

Training Zone	% of Threshold Power	Approx. % of Maximal HR*	Rating of Perceived Exertion 1-10 Scale	Primary Energy System	Primary Muscle Fibers	Primary Fuel	Benefits
5	Max effort	Maximum	10 Very Hard	Anaerobic	Fast Twitch IIa and IIb	Carbohydrate/ Creatine Phosphate	<ul style="list-style-type: none"> increases high energy phosphate stores (ATP/PCr) Increases neurological recruitment
4	100 - 120% TP	>85%	8 - 9 Hard	Anaerobic	Fast Twitch IIa	Carbohydrate	<ul style="list-style-type: none"> improves lactate clearance develops speed develops power elevates anaerobic capacity hypertrophy of fast twitch fibers increases anaerobic capacity increases VO2
3	85 - 100% TP	80 - 85%	5 - 7 Moderate to Hard	Aerobic and Anaerobic	Fast Twitch IIa	Carbohydrate	<ul style="list-style-type: none"> increases oxidative/glycolytic enzymes elevates lactate threshold develops strength increases blood buffering of lactate
2	60 - 85% TP	65 - 80%	3 - 4 Moderate	Aerobic	Slow Twitch	Fat	<ul style="list-style-type: none"> body fat/weight loss skill/technique development improves economy of movement increases capillary density increases oxidative enzymes slow twitch development connective tissue development increases stroke volume/maximal cardiac output increases muscle fuel storage builds muscular endurance and stamina increases blood volume
1	Up to 60% TP	Up to 65%	1 to 2 – Easy	Aerobic	Slow Twitch	Fat	<ul style="list-style-type: none"> removal of metabolic waste regeneration between intervals recovery after hard training rest during injury or illness warm up or cool down no muscular fatigue

*Fitness level, stroke volume, and a plethora of other factors effect heart rate and heart rate zones – see The Heartbeat of Power at <http://www.saris.com> for a more detailed explanation.

The dashboard overlay is positioned on a video of a road winding through a mountainous landscape. The road has a double yellow line and a white shoulder line. The sky is blue with a few clouds. The terrain is rocky and steep on the right side.

Segment Location: A black box with white text "Beartooth Pass" is located in the upper left of the video frame.

Climb Countdown Timer: A red box with white digital text "CLIMB 00:01:10" is located in the upper right of the video frame.

Training Activity & Zone: A black box with red and white text "HARD CLIMB" and "TZ 4" is located in the lower left of the video frame.

Current Ride Position: A vertical white line is positioned in the center of the video frame, indicating the current location on the terrain profile.

Terrain Profile: A line graph with a red line and green vertical markers is located in the lower center of the video frame.

Segment Timer: A black box with green digital text "00:36:12" is located in the lower right of the video frame.

TRAINING GOAL: BEGINNER

Segment	Time	Training Activity	TZ	RPM	Action
1	5:00	Warm-Up	1-2	80-90	Wine Country - Napa, CA - Use this segment to get your heart pumping faster and the blood flowing through your legs.
2	5:00	Rollers	3	90-110	Saguaro East - Tucson, AZ - Time to start charging with these fast tempo up-down intervals through the gorgeous Sonoran desert.
3	5:00	Hard Climb	4	70-80	Mt. Lemmon - Tucson, AZ- Dial in a medium hill on your trainer and settle in for a steady climb up this touchstone ride for serious cyclists around the world.
4	5:00	Fast Spin	2-3	90-110	Monument Valley, UT - Use this segment to work on smoothing your pedal stroke. Try a few sets of one-leg pedaling drills, where you pedal with first your right leg for 30 seconds, then your left leg for 30 seconds, then both legs. Repeat three or four times. Strive to even your spin over the entire pedal stroke.
5	5:00	Hard Climb	4	70-80	Beartooth Pass - Red Lodge, MT - Settle down for a long, steady climb on this world class mountain pass between Wyoming and Montana. Put your trainer on a medium-hard hill and get ready for a long, steady seated climb. Stand occasionally if you like to stretch your legs.
6	5:00	Rollers	3	80-100	Great Western Loop - San Diego, CA - The rolling country begins. Grind you way up the hills and fast spin down the backside.

Disclaimer: Prior to embarking on any fitness program please consult with your physician. Remember, the following are recommended as guidelines. Always think safety first. Each of the following is designed to create a distinct training adaptation.

TRAINING GOAL: BEGINNER (continued)

Segment	Time	Training Activity	TZ	RPM	Action
7	5:00	Rollers	3	80-100	Mt. Baldy - Glendora, CA - More up-down intervals, this time with longer intervals. Work on the uphill and pedal easy on the downhill.
8	5:00	Rollers	3	80-100	Great Western Loop - San Diego, CA - One final set of hill intervals. Keep working on the ups and recovering on the downs.
9	5:00	Climb	3-4	70-80	Aspen, CO - A solid, medium intensity climb. Stay seated for the entire segment. It's hard to do, isn't it?
10	5:00	Climb to Flat	3	80-90	Sedona, AZ - Dial up a medium hill for the first climb of this segment and take it seated. When the hills over, dial it back to a light uphill grade and continue your progress to Sedona.
11	5:00	Very Hard Climb	4-5	60-80	Mt. Evans, Idaho Falls, CO - The final, toughest climb of this ride, going to over 14,000 feet on the highest paved road in the U.S.. Make this your hardest effort of the day and don't let up till you hit the top!
12	5:00	Cool-Down	1-2	80-90	Wine Country - Napa, CA - It's time to recover and you've earned it! We finish this epic tour with a cool-down segment descending the back of Mt. Veeder and rolling into Napa. Lower your resistance to a flat road and keep your legs moving for the entire segment.

Disclaimer: Prior to embarking on any fitness program please consult with your physician. Remember, the following are recommended as guidelines. Always think safety first. Each of the following is designed to create a distinct training adaptation.

TRAINING GOAL: INTERMEDIATE

Segment	Time	Training Activity	TZ	RPM	Action
1	5:00	Warm-Up	1-2	80-90	Wine Country - Napa, CA - Use this segment to get your heart pumping faster and the blood flowing through your legs.
2	5:00	Rollers	3	90-110	Saguaro East - Tucson, AZ - Time to start charging with these fast tempo up-down intervals through the gorgeous Sonoran desert. Try standing on the short uphill segments.
3	5:00	Hard Climb	4	70-80	Mt. Lemmon - Tucson, AZ- Dial in a medium hill on your trainer and settle in for a steady climb up this touchstone ride for serious cyclists around the world. Every minute or so, stand and pedal harder for 10 strokes.
4	5:00	Fast Spin	2-3	90-110	Monument Valley, UT - Use this segment to work on smoothing your pedal stroke. Try a few sets of one-leg pedaling drills, where you pedal with first your right leg for 30 seconds, then your left leg for 30 seconds, then both legs. Repeat three or four times. Strive to even your spin over the entire pedal stroke.
5	5:00	Hard Climb	4	70-80	Beartooth Pass - Red Lodge, MT - Settle down for a long, steady climb on this world class mountain pass between Wyoming and Montana. Put your trainer on a medium-hard hill and get ready for a long, steady seated climb. Every minute or so, stand and pedal harder for 10 strokes.
6	5:00	Rollers	3	90-100	Great Western Loop - San Diego, CA - The rolling country begins. Fast spin with resistance you way up the hills and fast spin with light resistance down the backside.

TRAINING GOAL: INTERMEDIATE (continued)

Segment	Time	Training Activity	TZ	RPM	Action
7	5:00	Rollers	3	80-100	Mt. Baldy - Glendora, CA - More up-down intervals, this time with longer, harder intervals. Work it on the uphill and pedal easy on the downhill.
8	5:00	Rollers	3	80-100	Great Western Loop - San Diego, CA - One final set of hill intervals. Keep working on the ups and recovering on the downs. Ease it back for the last minute as a mini-recovery period.
9	5:00	Climb	3-4	70-80	Aspen, CO - A solid, medium intensity climb. Stay seated for the entire segment, increasing your resistance slightly every two minutes.
10	5:00	Climb to Flat	3	80-90	Sedona, AZ - Dial up a medium hill for the first climb of this segment and take it seated. When the hills over, dial it back to a light uphill grade and spin fast into Sedona.
11	5:00	Very Hard Climb	4-5	60-80	Mt. Evans, Idaho Falls, CO - The final, toughest climb of this ride. Time to play around the anaerobic zone. Dial in a very hard hill and every minute, stand and accelerate for 10 seconds. Don't let up till you hit the top!
12	5:00	Cool-Down	1-2	80-90	Wine Country - Napa, CA - It's time to recover and you've earned it! We finish this epic tour with a cool-down segment descending the back of Mt. Veeder and rolling into Napa. Lower your resistance to a flat road and keep your legs moving for the entire segment.
